Quantitative solutions for intelligence-driven future

The fascinating speed of advances in the field of artificial intelligence together with their increasingly open source nature, has become a key ingredient for companies to gain competitive advantage and hence strategically position themselves for the future.

With the vision of "Intelligence-driven future", 3IVIS partners with companies in the fields of finance and technology to provide the full value chain across development, deployment, maintenance, as well as independent review of machine learning and quantitative models.

We are firm believers of benefits of knowledge transfer in our partnerships, and support our partners as well as the community through a number of educational initiatives. We have reference projects with international clients in building their first Machine Learning / Natural Language Processing based model framework, as well as projects where we have helped our clients to optimise their existing framework to ensure the ability to leverage on state of the art models.

– *3IVIS focuses on quantitative model development for finance and technology with emphasis on application of Machine Learning methods*

– *3IVIS manages the IntelligenceReborn.com portal including educational content and latest developments in the field of Artificial Intelligence*

– *3IVIS organizes a number of events where Data Scientists and Quants share their work experience and challenges with the community*
