

DUDE CHEM

Your partner in pharma-outsourcing for the sustainable and digital age

As a high-tech virtual manufacturer of pharmaceuticals and their intermediates, DUDE CHEM is on a mission to transform the European chemical sector. Our strong IP portfolio of green chemistry solutions provides long-term value in API manufacturing, playing a central role in the sustainability and resilience of our cities.

The impacts of the COVID-19 pandemic have demonstrated the need for dependable, domestic supplies of life-saving pharmaceuticals. The resilience of these critical supplies is a central pillar of the EU Chemicals Strategy for Sustainability, not only because it increases Europe's capacity to respond to future health crises, but because it also contributes to the broader development goals of the European Green Deal as well.

DUDE CHEM is strategically positioned to meet these needs. By applying the newest computational modelling techniques, we rapidly adapt and scale up greener manufacturing routes that are both cost-effective and resilient in times of need.

- *DUDE CHEM's data-driven approach is a huge time-saver, ensuring rapid synthesis and reducing time-to-market by up to 80%*
- *Sustainability pays off with competitive advantages, cutting costs by up to 30% with our market-validated technology*
- *We have a track record of measurable sustainability optimisations, including reducing carbon intensity by 38%*
