

TEGEL PROJEKT GMBH

We are creating the future of Berlin TXL

The former Berlin-Tegel Airport (Berlin TXL) is one of the largest and ambitious urban transformation projects in Europe. BERLIN TXL comprises the (1) URBAN TECH REPUBLIC, a research and industrial park for urban technologies (with potential for 20,000 new jobs and over 5,000 students), and (2) SCHUMACHER QUARTIER, an ecologically and socially innovative district being built with 100% timber construction technology, yielding over 5,000 apartments for more than 10,000 people.

The State of Berlin has commissioned Tegel Projekt GmbH with the development and management of Berlin TXL. The state-owned business employs 80 people. Their tasks include planning for the construction of buildings and for the technical, transport and energy infrastructure, construction and site management, as well as space marketing and communicating with the general public about the project.

— *Berlin TXL - The Urban Tech Republic*
Campus for innovative urban technologies: for industry, startups and universities

— *Berlin TXL - Schumacher Quartier*
A new sustainable and socially-conscious residential district and Europe's largest timber construction development

— *Urban Tech solutions*
Renewable energies, intelligent water management, new mobility, sustainable construction, recycling and digital infrastructure
